Mohammad Reza Vazifeh

Full-Stack .NET Developer & Software Architect

Shiraz, Iran · +98 933 229 7757 · mv6468@gmail.com

mohammadrezav.ir · linkedin.com/in/sirtype · github.com/SirTypeOfficial

Professional Summary

Full-Stack .NET Developer and Software Architect, in commercial production since July 2018. Day-to-day systems sit on .NET 10, Clean Architecture, SQL Server, and FastAPI across municipal transport, gold ERP, and product search. Closed school-transport settlement for 200k+ users in some cities.

Core Competencies

Core production: .NET 9/10 | ASP.NET Core | C# | Clean Architecture | Onion Architecture | DDD | CQRS | Microservices | SQL Server | EF Core | RabbitMQ

Clients and mobile: Blazor | Blazor Hybrid | .NET MAUI | Bit Platform | XAML | Kotlin | Jetpack Compose | Capacitor | WebView | Xamarin.Android | Android

Data, messaging, automation: PostgreSQL | Redis | SignalR | pgvector | Hangfire | n8n | MQL4 | MQL5 | Docker | Blockchain | smart contracts

Applied intelligence: Python | FastAPI | ALPR | YOLO | Persian OCR | OpenCV | Hezar

Web and delivery: Vue.js | PHP | ASP.NET MVC | Razor Pages | CI/CD | Git | IIS | Serilog

Explored, not profile skills: Kubernetes (personal test only; not the production orchestrator). Pine Script (practice on the trading path). Digital Marketing, MBA, and DBA were awareness and practice on the independent stretch. DBA practice covered initial config, maintenance jobs, full and log backups, and application-level restore. Always On and clustering were not set up in production.

Key Technical Experience

Employer	Description
Ayar Plus Part-time / Remote Contractor, outside Pazhoohan hours **Time period** Sep 2025 – Sep 2026 Remote from Iran; Kuwait market	**Role:** Part-time / Remote Technical Contractor **Project:** Kuwait gold ERP • Built the gold ERP client on .NET MAUI and .NET 10 so inventory, gold calculations, and accounting ran on a multilingual XAML screen against PHP. • Kept invoices issuing when the shop network was down, with a local queue, send status, and last-write or server-version conflict handling. API v1/v2 let older clients, and an offline invoice, keep posting after a server update, and the Windows client discovered Android clients on the LAN. • Shipped ShopSync into the shops so invoices kept issuing when the WAN was down. The MAUI client keeps no local database. An ASP.NET server on the LAN is the source of truth, and an outbox with idempotency keys syncs to Akaunting. Sold commercially to multiple shops. No license count. • Published Android and iOS builds through CI/CD and Azure Pipelines so Google Play and App Store releases continued for live customers. • Connected Kuwait shop card readers for Civil ID and stored the card photos on ImageKit for the Android app. A separate shop PC sat on the reader, and I debugged that PC remotely. • Ran the remote weekly sprint, with daily and weekly meetings, across Mashhad, Qom, and the Product Owner for part of the contract. • Opened the full cross-platform Bit Platform rewrite with a legacy data migration into the new system and PDF print for receipts and invoices. The rewrite moved to Blazor Hybrid on ASP.NET because the PHP backend was slow to integrate. The KaratFlow migration moved Akaunting (Laravel/PHP) into a redesigned schema. The hard part was KWD rounding and decimal precision. • KaratFlow, in this same contract, keeps a dual ledger of 999 gold weight and KWD on invoices, purchases, and receipts, and PACI reads Civil ID on Windows. It is a parallel adjacent project. A related sync approach was reused there. The client design is not ShopSync. • Tried the BahamShop RAG pilot on Ayar Plus product and document questions. Answers stayed in a review table and off the invoice path. **Tools & Technologies:** .NET 10, .NET MAUI, XAML, ShopSync, Bit Platform, Blazor, ASP.NET Core, PHP, Akaunting, PostgreSQL, Redis, SignalR, Hangfire, QuestPDF, EF Core, CI/CD, Azure Pipelines, ImageKit

Ertebatat Pazhoohan Matin (Knowledge-Based)
Full-time / On-site-Hybrid, primary employment
Time period
Jun 2025 – Jul 2026
Shiraz, Iran

Role: Full-time Full-Stack Developer (On-site/Hybrid)
Project: Municipal school transport

- Cleared peak-hour SQL Server locks on movement reports by reading execution plans and adding non-clustered indexes on date and the hot filters. Serilog wrote structured logs on IIS.
- Shipped Safir Mehr for drivers, students, and parents on the Isfahan and Shiraz flavors, using Kotlin and Jetpack Compose, a native shell with WebView, and Capacitor on iOS. Parents saw driver status from the driver's location, and FCM sent student-readiness alerts from the driver's area.
- Spent the first month on the production system across more than 80 tables in different process areas. Most of the professional documentation was missing on arrival.
- Worked smart service assignment in the one Onion solution that covered the cities. Student routes and services drove the school and driver assignment, with contract management and cost calculation in the same domain.
- Made the dashboard faster by optimizing its queries and upgrading the project's .NET version. In-project tests compared fetch speed across data volumes and modes.
- Kept settlement correct across fleets, services, drivers, students, and parents for more than 200,000 users in some cities, through token, verify, and a ledger row. The platform served the municipalities of Shiraz, Isfahan, and Qazvin.
- Wired ALPR into the inspector flow so a movement row was written only after fleet validation, on FastAPI, a YOLO-family detector, Persian OCR, and OpenCV. A low confidence score, or a timeout of about 3 seconds, fell back to manual entry. The service stayed off the main API.
- Shipped the OnlineTaxiMatin demo, covering OTP, map, fare, trip request, and driver accept or reject, on .NET 10, Razor Pages, Blazor Server, PostgreSQL, and SignalR.
- Kept SmartTaxi as its own solution, with a Domain / Application / Infrastructure split, an Android client, and Docker.

Tools & Technologies: C#, ASP.NET Core, Onion Architecture, SQL Server, Serilog, IIS, Kotlin, Jetpack Compose, Capacitor, FCM, FastAPI, Python, OpenCV, .NET 10, PostgreSQL, SignalR

BahamShop
Time period
Dec 2024 – Jun 2025
Shiraz, Iran

Role: Technical Lead & Backend Automation Architect
Project: Product search

- Took the product-search site from no revenue to first-month income on click SEO, on ASP.NET Core 9 with Clean Architecture and caching. A scraper loaded the listings. Onboarded the first major marketplace seller and linked shared products. The site links out to shops, earns per click, and already had strong SEO.
- Ran n8n so a language model drafted SEO tags, copy, and summaries, and the SEO team edited and approved them before anything was published. That path also raised product indexing speed. The same pipeline collected keywords and product info, drafted with H1/H2/H3, humanized the text, and waited for site-admin approval. It produced pages for about 9,000 tags and categories much faster.
- Kept production as one project in one solution and added services there. An earlier repo snapshot is ASP.NET Core 6 MVC (EF Core 7, SQL Server), later upgraded to ASP.NET Core 9. A monorepo / super-app split did not replace it. A script rebuilt existing images smaller so pages loaded faster. Shared assets and the home page's general queries moved into cache.
- Kept scrapers for third-party price-comparison sources current through timeouts, blocking, and frequent HTML changes, with strict deduplication on products, images, and comparison tags.
- Piloted RAG for product and document questions on FastAPI, pgvector, and OpenAI embeddings, with SQL filters on category and stock. Answers were stored for review and stayed off the main site.

Tools & Technologies: ASP.NET Core 9, C#, Clean Architecture, n8n, FastAPI, PostgreSQL, pgvector, EF Core, SQL Server

Independent
Independent; part-time client work
Time period
Jan 2023 – Dec 2024
Shiraz, Iran

Role: Independent engineer; trading systems, automation, and architecture R&D
Project: Trading systems and client automation

- Built MQL4 and MQL5 trading bots with module-level backtests, plus budget and capital-management rules.
- Delivered part-time client work through n8n pipelines and e-commerce sites, with occasional consulting.
- Practiced Blazor Hybrid and .NET MAUI on cross-platform clients, and used Docker to stand up databases and test services on Linux and Windows.
- Built a few .NET samples that implemented a smart contract inside the project.

Tools & Technologies: MQL4, MQL5, Python, n8n, Docker, Blazor Hybrid, .NET MAUI, Blockchain, smart contracts

---

ParsiaAfzar FaraAndishanNovin
Full-time
Time period
Oct 2020 – Jan 2023
Shiraz, Iran

Role: Electricity-distribution automation support and development; microservices rewrite
Project: Electricity-distribution automation

- Kept electricity-distribution automation in production for Bushehr, Mazandaran, Greater Tehran, Arak, and other cities, with ticket-driven support and feature work on the existing ASP.NET MVC stack.
- Rewrote those separate MVC codebases onto one Microservices platform with CQRS, RabbitMQ, DDD, and Vue.js. SQL Server held the data. EF Core did the first read/write split, and heavy queries moved into stored procedures.
- Shipped an in-house ASP.NET Core MVC CMS so company site content could be updated without a separate vendor.

Tools & Technologies: C#, ASP.NET MVC, ASP.NET Core, Microservices, CQRS, RabbitMQ, DDD, Vue.js, SQL Server, EF Core, Serilog

---

Rastak International Holding
Time period
Oct 2019 – Aug 2020
Shiraz, Iran

Role: .NET Developer; project management in late tenure
Project: CRM and networked investment platform

- Brought Git into daily delivery with the project manager, and moved the team onto Agile/Scrum. This was the first place I used Git and DevOps at work.
- After the project manager left, kept the CRM and the networked investment platform shipping, including Angular on the CRM frontend. The CRM backend is ASP.NET Core 3.1.

Tools & Technologies: C#, ASP.NET Core 3.1, Angular, Git, SQL Server

---

Nikan Exir Vista Rayan
Time period
Jul 2018 – Oct 2019
Shiraz, Iran

Role: .NET Developer
Project: Appointment queue

- Built the REST appointment-queue API for the team PWA and kept it in production through this tenure, on ASP.NET Core and SQL Server. The company made accounting software.

Tools & Technologies: C#, ASP.NET Core, SQL Server

Flagship Projects

Gold ERP, Kuwait | Ayar Plus

- AyarPlus1/MAUI-App: production Ayar+ client for invoices, gold rates, RBAC, Ably sync, and six languages, on .NET 10 MAUI and a Laravel API, with OneSignal and Sentry.
- AyarPlus1/AyarPlusBlazorMAUI: Kuwait wholesale gold ERP with a dual ledger of 999 gold and KWD, PACI, and KNET, on .NET 10, Blazor Hybrid/MAUI, PostgreSQL, Redis, and QuestPDF.
- AyarPlus1/AyarPlusBit: gold and jewelry ERP on Bit Platform, offline-first, SignalR rates, and RAG, on .NET 10, Blazor WASM/MAUI, PostgreSQL, pgvector, and Hangfire.
- AyarPlus1/ShopSync: offline-first POS local gate with outbox, conflict resolution, and Akaunting sync, on ASP.NET Core 10, EF Core, SQLite, SignalR, ZeroMQ, and Polly. In the shops the MAUI client keeps no local database, the LAN ASP.NET server is the source of truth, and idempotency keys go with the outbox. No shop count. SirTypeOfficial/ShopSync is empty. The implementation is the AyarPlus1 repo.
- SirTypeOfficial/KaratFlow: the same 999 and KWD ledger, read with role 07. The solution started from the bitplatform template. Docker deploy config names karatflow.app.

- AyarPlus1/AyarPlus-interview: interview exercise, a .NET 10 contacts API plus a MAUI client and EF Core. Not a production Ayar product.
- AyarPlus1/gantt-reports: static HTML page for contractor hours, payments, and a Gantt chart, with Vazirmatn and print-to-PDF. No server app.
- AyarPlus1/Laravel: app pushed from the contractor workspace on develop. The fact sheet does not cite composer.json, so the Laravel version is not confirmed from the tree.

School transport, ALPR, taxi | Ertebatat Pazhoohan Matin (Knowledge-Based)

- MatinCompany/Service_Schools_NG: registration, fleet, settlement, and multi-city tariffs. Projects named in the fact sheet: DomainClasses, ServiceLayer, DataAccess, ViewModels, and Web. Onion-style split. The GitHub copy matches gitea.rpnr.ir.
- MatinCompany/Service_Schools_NG_Lite: lighter sibling. The company remote is Gitea. The lite fact sheet does not cite a csproj, and Onion is not copied onto this repo from NG.
- MatinCompany/SafirMehr: mobile client with Isfahan and Shiraz flavors. Kotlin / Jetpack Compose, WebView, Capacitor iOS, FCM, foreground GPS.
- MatinCompany/AutomaticLicensePlateRecognition: Iranian plate reading. Python 3.8+, YOLO, Hezar OCR, FastAPI. Docs say the default mode is offline.
- MatinCompany/OnlineTaxiMatin and MatinCompany/SmartTaxi: two projects with different goals. SmartTaxi includes SmartTaxiAndroid, a Capacitor Android/iOS client with Shiraz and Isfahan configs, and SmartTaxiHtmlTemplate, a static HTML template.
- MatinCompany/Matin-DeskExtras is a desktop file archive (contracts, SQL, APK, KeyStore). It is not a separate product and is not a resume attachment.

Product search and data tools | BahamShop

- SirTypeOfficial/BahamShop and the org copy BahamshopCompany/BahamShop: Persian product search and multi-store prices. The personal fact sheet names ASP.NET Core 6 MVC, EF Core 7, SQL Server, Quartz, and Kavenegar, one project in BahamShop.sln. That tree is an earlier snapshot, later upgraded to ASP.NET Core 9 with Clean Architecture. Clean Architecture and n8n live in the role narrative. n8n sits outside this repo.
- BahamshopCompany/Bahamshop.Monorepo: Admin, Core, Sales, and Vendor split in a Bit Platform style. That super-app / monorepo move did not replace production. The short fact sheet does not name a .NET version.
- BahamshopCompany/BahamshopOnBit: unfinished cross-platform attempt, a Bit Platform host with BahamshopOnBit.sln.
- BahamshopCompany/bahamshop-sync-wordpress-plugin: PHP WordPress plugin that syncs BahamShop data.
- C# tools for third-party price-comparison sources: image fetch, product queue, UpdateFaTitle, ImportCityAndProvince, DeleteDuplicateImages, and BhamshopDBMigration (database migration; the short fact sheet does not name the engine).
- Static storefronts: bahamshop-html and a second HTML, CSS, and JavaScript storefront.
- A marketplace price-scraper tool and frest: stack and architecture are not confirmed in the fact sheets.

Electricity-distribution automation | ParsiaAfzar

- AutomationBackend (org and personal copy): dynamic-form and cartable API on .NET 5, ASP.NET Core, MediatR, EF Core, and SQL Server. CQRS via MediatR.
- AutomationBlazor: Blazor WASM client plus the workflow backend, with Syncfusion, MediatR, and SignalR, on .NET 5.
- AutomationUI: Persian RTL admin SPA on Vue 2, Quasar 1.x, Axios, Vuex, and Vue-i18n.
- Automation: Automation.sln archive with a Dockerfile. The short fact sheet does not name the framework version. CQRS is taken from the Backend fact sheet, not from this short file.
- ParsiaAfzar.ir / ParsiaAfzarCore: company site on ASP.NET Core 5, EF Core, and SQL Server. The custom CMS in the role narrative is this family.
- Provincial MVC trees on .NET Framework, separate from the Microservices rewrite: KhozestanSAM (4.5.2), BoushehrNAJM (4.5), Mazandaran-Najm (web 4.5 and a 4.5.1 service), BoushehrEgsService (ASMX), Mazandaran-Supervision and SupervisionBoushehr (web, Android client, web service). Khuzestan is not in the narrated city sentence. It is the name of that tree.
- BoushehrServices: NajmService and TestNajmService. The short fact sheet does not name the target framework.

- TricklandCms: .NET 5 multi-host (API, WebUI, Blazor) with MediatR, EF Core, IdentityServer, Syncfusion, and SQL Server. The Parsia link is a hypothesis, not a confirmed deliverable.
- BoushehrNAJMCore, BoushehrLibrary, ParsiaFiles, and BehnamAfrasiabi: zip pack, DLL archive, documents, or an empty root. No product architecture is claimed from them.

CRM and clinic | Rasta

- RastakHolding/CRM: companies, contacts, deals, projects, attendance, light finance, SMS, and email. ASP.NET Core 3.1, EF Core 3.1, SQL Server, JWT, Identity, Swagger, Kavenegar, NLog. The Angular frontend is not this repo.
- RastakHolding/IndustryClinic: a separate solution with an IndustryClinic tree, a CRM tree, and a Xamarin client. C#, Java, JavaScript, HTML, CSS.

Independent work and personal projects

- SirTypeOfficial/trading-bot: Streamlit backtesting with a moving-average crossover plus LSTM and Grid/Martingale sizing, on Python, Keras/TensorFlow, and Matplotlib. MQL is not in this repo. Mapped to Jan 2023 – Dec 2024.
- SirTypeOfficial/VueCA (and the copy under the Parsia org): a personal try of Vue with Clean Architecture, commits 6–22 Feb 2021. .NET 5, OIDC, SQL Server, Domain / Application / Infrastructure / WebUI. Not a Parsia job and not a Rasta job.
- SirTypeOfficial/LinguaStream: Persian-to-English voice translation with XTTS-v2, commit 8 Oct 2025. Python, Whisper, Hugging Face, Coqui TTS, Streamlit. That date is outside the independent stretch through Dec 2024.
- SirTypeOfficial/android-to-windows-streaming: Android camera and microphone as a Windows virtual webcam, 27 Oct through 1 Nov 2025. Gradle app, Python receiver, AVStream virtual camera (vcam.inf), PortCls virtual microphone (vmic.inf).
- SirTypeOfficial/WireguardConfigToQrcode: Python scripts that turn a WireGuard config into a QR code, sing-box/Throne JSON, and URIs. Commit 29 Sep 2025.

Templates, samples, and the personal archive

These are not employer products and are not pinned to a job period unless a fact sheet cites a commit date.

- Shops and CMS with tree evidence: BookShop (ASP.NET Core 2.1 MVC, EF Core, SQL Server), NewsWebsite (ASP.NET Core 3.1), SportShop (.NET 10, MVC, Identity, Razor), WPro (.NET 5 MVC), ETHMetamaskConnect (ASP.NET page for MetaMask), Ably01 (ASP.NET Core 7, Razor Pages, EF Core, SQL Server; fleet-ops scaffold).
- Architecture templates: BaseMicroserviceBlazor (.NET 6, Blazor WASM, IdentityServer, Clean Architecture), BaseOnBit (.NET 9, Bit Platform v9.7.2), Custify (.NET 9, Blazor WASM/MAUI), GPHOnBit, PayHubOnBit (.NET 9 scaffold; not a shipped payment product), DariushT_DDD_Eshop (.NET 5, MediatR, DDD), DT_CMS and Template_CMS (.NET 7, Clean Architecture), Template.CMS.OneLayer (.NET 7, single project), MBBase (.NET 6), MyEShop (.NET 7, Duende IdentityServer), StarterSolutionCleanCode (.NET 7, DDD, Blazor/MAUI), rayankar-test (customer CRUD assignment on .NET 8 / Blazor with Gherkin), MV.Common (.NET 8 libraries).
- Plans, not finished products: DynamicECOMMERCE (planned .NET 10, Razor Pages, PostgreSQL 16), DynamicShop (WooCommerce rebuild blueprint; shipped code not confirmed), EcoCivitas, PulseAIWorld, SNT (documents).
- ClientKeeper: Next.js, React, Firebase, next-intl, and Genkit UI. On the 22 Sep 2026 pass the OTP, Firestore, and Genkit paths were largely unwired.
- react-learn: interview notes and an RTL practice app on React and Vite. SpotReverse: WinForms research plus a C dump. vuexy-full-version-react: Vuexy 6.4.0 template. Resume: this career vault. SirTypeOfficial: profile README.
- Azure archive on the personal account, original commit dates kept: Base (netcoreapp3.1, EF Core, Identity, JWT, Syncfusion, NLog), VueCore (layered ASP.NET Core 3.1 host, not a Vue CLI app), LSS, LMSocial, StateApp, and PersianAppkitShop (Clean Architecture), LMSocial-sirtype (separate tree, Nov 2020), Personal (layered 3.1 site), BaseNet5Blazor, Blazor, AppkitVuexy, DecodeJsSirType (WinForms, .NET Framework 4.7.2), HtmlTranslator (WinForms, netcoreapp3.1, HtmlAgilityPack), SamDynamic (two .NET 5 class libraries), AngularShopCleanArchitecture (shop sample; layer detail stays in that fact sheet).

Nikan has no repo in these accounts. The forks bitplatform, DntSite, and Auto_job_applier_linkedIn had no commits by mv6468@gmail.com and are not shipped work. DevimanAI repos are not part of this resume.

Certifications

- Professional MVC and ASP.NET Core | Islamic Azad University | Bahman 1398 / Jan 2020 (two PDFs: ASP.NET MVC and ASP.NET Core 2)
- Mobile Application Development with Xamarin.Android | Industrial Management Institute, South Unit | Bahman 1395 / Jan 2017
- Web Development with PHP and CodeIgniter | Industrial Management Institute, South Unit | 1393 / 2014 (PDF not in assets)
- Object-Oriented Programming (OOP) and C# Fundamentals | Industrial Management Institute, South Unit | Shahrivar 1392 / Aug 2013

Photoshop (Shahrivar 1398), 3ds Max Animation (Aban 1392), and WordPress (Azar 1395) PDFs from the same institute are on disk. They sit outside the .NET, applied-intelligence, and automation triad and are not profile skills.

Education

- Professional MVC and ASP.NET Core, Islamic Azad University | 1398, certificate Bahman 1398 (during the Rasta tenure, after leaving Nikan)
- Mobile development with Xamarin.Android, IMI South | 1395, certificate Bahman 1395
- Web development with PHP and CodeIgniter, IMI South | 1393
- Object-oriented programming and C# fundamentals, IMI South | 1392, certificate Shahrivar 1392
- Self-study before Nikan: Arezoo Ebrahimi's ASP.NET Core course (more than 120 hours) and ASP.NET MVC 5 books
- Two years of military service, completed before joining Nikan in Tir 1397 / Jul 2018
